## TA1 - Agustín Fernández

## Ejercicio 1

### Preparación de los datos

2)

a.

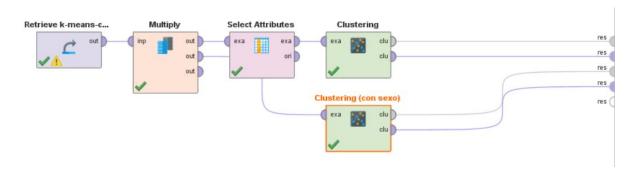

b.

c. No se identificaron outliers que puedan afectar el algoritmo.

#### Modelado

#### Sin normalizar

Se aplicó el modelo k-means al dataset incluyendo y sin incluir 'Sexo', y en ambos casos los clusters coincidieron (en cantidad de elementos y en el centroide).

### Resultado del clustering:

# **Cluster Model**

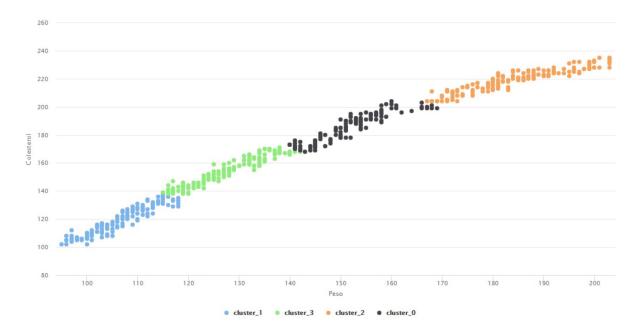

Cluster 0: 118 items Cluster 1: 140 items Cluster 2: 154 items Cluster 3: 135 items Total number of items: 547

#### Tabla de centroides:

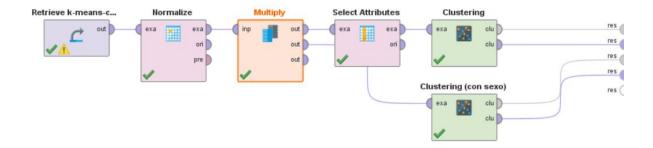

Attribute	cluster_0	cluster_1	cluster_2	cluster_3
Peso	152.093	106.850	184.318	127.726
Colesterol	185.907	119.536	218.916	154.385

### Tabla de centroides (con sexo):

Attribute	cluster_0	cluster_1	cluster_2	cluster_3
Peso	152.093	106.850	184.318	127.726
Colesterol	185.907	119.536	218.916	154.385
Sexo	0.441	0.543	0.591	0.459

#### Normalizando los datos

En este caso, la ocurrencia del sexo sí marca un cambio en los clusters:

Sin tener en cuenta el sexo:

# **Cluster Model**

Cluster 0: 141 items Cluster 1: 148 items Cluster 2: 146 items Cluster 3: 112 items

Total number of items: 547

Attribute	cluster_0	cluster_1	cluster_2	cluster_3
Peso	0.318	0.833	0.113	0.547
Colesterol	0.409	0.884	0.138	0.650

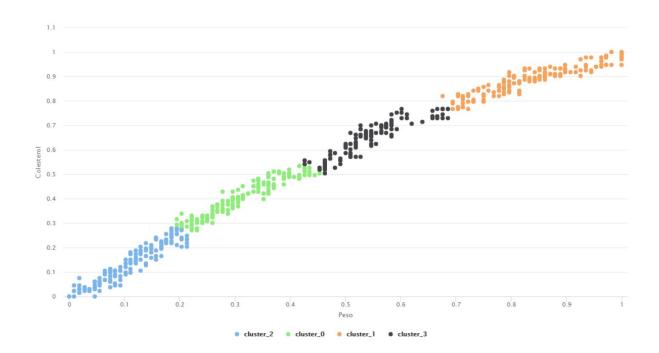

Teniendo en cuenta el sexo:

# **Cluster Model**

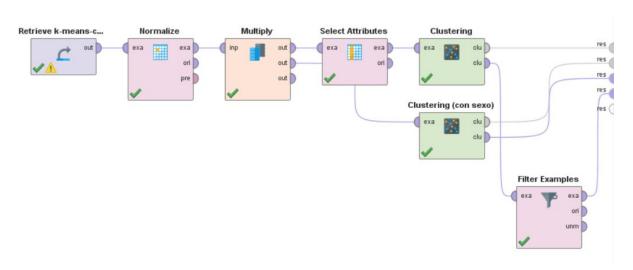

Cluster 0: 141 items Cluster 1: 157 items Cluster 2: 109 items Cluster 3: 140 items

Total number of items: 547

Attribute	cluster_0	cluster_1	cluster_2	cluster_3
Peso	0.188	0.255	0.726	0.717
Colesterol	0.238	0.320	0.803	0.787
Sexo	1	0	0	1

#### **Despliegue**

Las consultas SQL para los demás clusters serían:

cluster\_0: SELECT First\_Name, Last\_Name, Policy\_Num, Address, Phone\_Num FROM PolictyHolders\_view
WHERE Weight >= 140 AND Weight <= 169
AND Cholesterol >= 168 AND Cholesterol <= 204

cluster\_1: SELECT First\_Name, Last\_Name, Policy\_Num, Address, Phone\_Num FROM PolictyHolders\_view WHERE Weight <= 118 AND Cholesterol <= 138

cluster\_3: SELECT First\_Name, Last\_Name, Policy\_Num, Address, Phone\_Num FROM PolictyHolders\_view

WHERE Weight >= 115 AND Weight <= 142 AND Cholesterol >= 138 AND Cholesterol <= 167
